
Maintenance Services and Safety Inspections:

Routine lighting pole maintenance and safety inspections are essential to ensure the modern appearance and structural integrity of aging infrastructure. Corrosion, which reduces structural integrity, is inevitable. All natural and man-made structures, whether manufactured from steel, wood, aluminium or other materials, are susceptible to decay and eventual failure.

With proven experience in designing and manufacturing decorative wooden lighting poles, Valmont's technical team also offers inspection and routine maintenance services for installed wood poles which can enhance the appearance and service life of these structures. You can view and download our maintenance guide for wooden poles from [here](#).
