

The Next Evolution in Irrigation Management from Valley®

One Powerful Platform to Manage Your Irrigation

AgSense® 365 consolidates our best-in-class remote management applications into one powerful platform, offering seamless and intuitive irrigation control that's more robust than ever.

Key Benefits:

- Monitor and control remotely from anywhere, anytime, using your smartphone, tablet or computer
- Customizable notifications and text alerts
- Intuitive and easy-to-use interface
- Visualize your farm in list or map view
- Works with any brand and any age of pivot, seamlessly integrating them into a single dashboard
- Enhanced security with robust technology
- Reduce labor costs
- Full visibility and control for total peace of mind
- Save time, giving you more moments with your loved ones

The Most Intuitive and Easy-To-Use App for Remote Irrigation Management

AgSense 365 gives you all the information you need right up front. It's the ultimate command center to experience full access to the Valley technology you depend on daily. Within AgSense 365, you will find easy-to-navigate features to stay connected to your fields – anytime, anywhere.

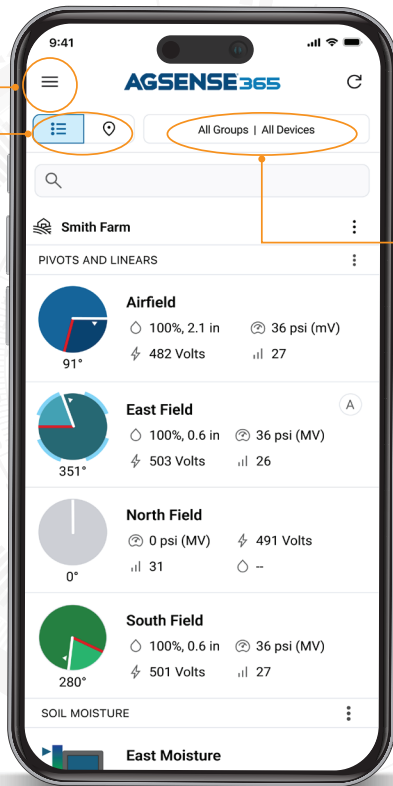

Quick Navigation

From the main menu, access the power of all features and tools available to you within the app including alerts, billing, help and more.

Customize Your View

Switch between list or map view layout to easily access all your fields.

Filtering

Drill down the view to highlight the specific details that matter most.

Scroll Down to view devices, controls, weather and more

Pivots and Linears

PIVOTS & LINEARS

North Field Pivot
 100%, 2.1 in 36 psi (mV)
 482 Volts 27

East Field Linear
 100%, 0.6 in 41 psi (mV)
 501 Volts 26

Pumps and Tanks

PUMPS & TANKS

Pump Command
 4.19 v On
 Medium 43.5 PSI 26

Fertilizer Tank
 12:34:44 PM On
 38% 18.01 (mA) Relay 1 Off

Weather and Probes

SENSORS & RELAYS

Weather Station
 33% 45 °F
 11 mph 1.25 in

Soil Moisture Probe
 On 08:31:14 AM
 89% 28 Relay 1 Off

Monitor & Control

Stay connected to your fields 24/7 with tools that control everything from pivots to pumps and more:

- Precisely control irrigation application rates throughout the field
- Optimize pump water delivery remotely
- Track soil moisture levels and weather conditions
- Monitor flow and tank levels
- Visualize data on historical water application by angle
- Analyze water usage and generate customized reports to improve decision-making

Forecast & Plan

Irrigation Scheduling improves water application, saving money and increasing your productivity.

Optimize & Apply

Leverage Valley Variable Rate Irrigation (VRI) to apply water where it's needed and in the amount required to maximize yield potential.

Machine Diagnostics

Valley's Machine Diagnostics uses sensor-driven technology to track runtime of each tower and send real-time alerts that pinpoint faults in alignment, tire pressure and water application – allowing you to stay on top of maintenance intervals and fix issues quickly without walking the pivot.
